GENERAL INFORMATION:
APPLICANT: Bernhard, Susan L.
APPLICANT: Better, Marc D.
APPLICANT: Carroll, Steve F.
APPLICANT: Carroll, Steve F.
APPLICANT: Carroll, Steve F.
TITLE OF INVENTION: Materials Comprising and Methods of
TITLE OF INVENTION: Composition and Use for Ribosome-Inactivating Proteins
APPLICANT: VITETIA, ELLEN S.
APPLICANT: GHETIE, VICTOR F.
APPLICANT: GHETIE, VICTOR F.
APPLICANT: BALLUNA, JOAN
APPLICANT: BALLUNA, ROXANA G.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR AMELIORATING VASCULAR LEAK
TITLE OF INVENTION: SYNDROME (VLS)
CURRENT APPLICATION NUMBER: US/09/538, 873
CURRENT PILLING DATE: 2000-03-30
EARLIER APPLICATION NUMBER: 60/126,826
EARLIER FILLING DATE: 1999-03-30

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1, Application US/08488113B
Patent No. 5744580
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Setter, Marc D.
APPLICANT: Studmika, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating TITLE OF INVENTION: Proteins
NUMBER OF SEQUENCES: 169
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        97.5%; Score 941; DB 1; Length 267; 94.9%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2, 7

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A,Molecule type: protein
A;Residues: 303-325, F',327-330, T',332-361, D',363-373, G',375-403, T',405-551, V',553-
C;Comment: This protein has strong agglutinating activity and weak cytotoxicity compared
C;Superfamily: ricin; rRNA N-glycosidase homology
C;Reywords: duplication; glycoprotein; glycosidase; hydrolase; lectin; RNA binding; seed
F;12-240 bomain: signal sequence #status predicted <STG>
F;25-290/Product: agglutinin chain A #status predicted <ACH>
F;35-281/Domain: rRNA N-glycosidase homology <RNG>
F;319-361,365-465-443,489-528,531-564/Region: 40-residue repeats
F;319-361,365-465-443,489-528,531-564/Region: 40-residue repeats
F;319-361,365-382-364,489-528,531-564/Region: Ann #status predicted
F;104,147,231,232/Binding site: substrate (Tyr, Tyr, Glu, Asn) #status predicted
F;282-306,322-341,365-382-453-466,492-509/Disulfide bonds: #status predicted
F;324,337,348/Binding site: N-acetylgalactosamine (Asp, Glu, Ann) #status predicted
F;356,557/Binding site: N-acetylgalactosamine (Asp, Asn) #status predicted
F;356,557/Binding site: N-acetylgalactosamine (Asp, Asn) #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 3
```

A; Molecule type: protein

A; Accession: JT0003

A; Accession: A36273

```
Alloss letterwises desiros of an A chain, which inhibits protein synthesis by inactivating the A and B chains are linked by a single disulfide bond, which is essential for toxicit (c) superfamily: rich; rRNA N-glycosidase homology (c) Keywords: disulfide bond; duplication; glycosidase; hydrolase; hydrolase; lectin; py F;1-251/Product: abrin-d chain A #status predicted «ACH»
F;7-251/Product: abrin-d chain B #status predicted «BCH»
F;261-258/Product: abrin-didone carboxylic acid (GIn) #status predicted
F;164,167/Active site: Glu, Arg #status predicted
F;164,167/Active site: Glu, Arg #status predicted
F;260,253,354,401,402/Binding site: Carbohydrate (Asp, Asn) #status predicted
F;280,312/Binding site: N-acetylgalactosamine (Asp, Asn) #status predicted
F;500,521/Binding site: N-acetylgalactosamine (Asp, Asn) #status predicted
                                                                                                                                                                                                                                 three distinct isoabrins determined by cDNA sequencing. Cor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and the expression of the A-chair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: EMBL:X55667; NID:g16084; PIDN:CAA39202.1; PID:g16085
C;Comment: Abrin consists of an A chain, which inhibits protein synthesis by inactivating
The A and B chains are linked by a single disulfide bond, which is essential for toxicit

"Analysis of several key active site residues of ricin A chain by mutagenesis and X-ray crystallography.";

"L protein Eng. 5:775-779(1992).

"I protein Eng. 5:775-779(1992).

"I responsible for inhibiting protein synthesis through the catalytic inactivation of 608 ribosomal subunits. It acts as a glycosidase that removes a specific adenine residue from an exposed loop of 288 ribosomal SNA. As this loop is involved in the binding of elongation factors, the modified ribosomes are unable to support protein synthesis. The A chain can inactivate a few thousand ribosomes compart in the binding of elongation synthesis. The A chain can inactivate a few thousand ribosomes compart in the binding of elongation make new once. A single A-chain molecule can therefore kill an animal cell. The B chain binds to cell receptors and facilitates the entry into the cell of the A chain, B chains are also responsible content in an intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the intervance of the in

-!- SUBUNIT: Disulfide-linked dimer of A and B chains.
-!- DOMAIN: The B chain is composed of two domains, each domain consists of 3 homologous subdomains (alpha, beta, gamma).
-!- PTM: THE MAJOR A-CHAIN IS GLYCOSYLATED ONLY IN POSITION 45 AND THE MINOR A-CHAIN IS GLYCOSYLATED ALSO IN POSITION 271.
-!- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY: TYPE 2 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "X-ray structure of recombinant ricin A-chain at 1.8-A resolution.";

"Studies on crystal structures, active-centre geometry and deputinating mechanism of two ribosome-inactivating proteins.";

Biochem. J. 309:285-298(1995).
-!- FUNCTION: TRICHOSANTHIN IS AN ABORTION-INDUCING PROTEIN. IT IS CAPABLE OF INHIBITING HIV-1 INFECTION AND REPLICATION. IT INACTIVATES EUKARYOTIC 608 RIBOSOMAL SHBUNITS.
-!- CAPABLE OF CATIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S FRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
TYPE I RIP SUBFAMILY.
                                                                                                                                                                                                                                                        SEQUENCE FROM N.A.

REDINBERGABLIN: Genomic cloning, characterisation and the expression of the A-chain in Escherichia coli.";

ELL. J. Biochem. 198:723-732(1991).

CC SYNTHESIS THROUGH THE CATALITIC INACTIVATION OF 608 FINDSOMAL SUBUNITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S.RNA. THE CC BINDING OF ABRIN TO THE CELL MEMBRANE THAT PRECEDES ENDOCYTOSIS.

CC BINDING OF ABRIN TO THE CELL MEMBRANE THAT PRECEDES ENDOCYTOSIS.

CC COTALITIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 288 rkNA.

CC -- SUBUNIT: DISULFIDE-LINKED DIMER OF AND B CHAINS.

CC -- SUBUNIT: DISULFIDE-LINKED DIMER OF TWO DOMAINS. EACH DOMAIN CONSISTS OF 3 HOMOLOGOUS SUBDOMAINS (ALPHA, BETA, GAMMA).

CC -- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-CC INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.

CC -- SIMILARITY: CONTAINS 2 ricin B-type lectin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.
